

Plant Medicine for Hemorrhoids has Great Benefit

The last part of the digestive system anus is formed of several muscles that act as a sphincter, or gate. These sphincters open up when you go to the bathroom and invite the stools to pass out. There are two sets of veins, or bloodstream. The first is on the inside and the other one on the outside of the rectum. In cases of constipation, the stools harden and also the rectum has to push harder to get the bar stools out. This could cause trauma to the rectum and may cause the blood vessels to swell. These swollen veins are known as **hemorrhoids**.

- **Hemorrhoids** usually show up as occasional bleeding after defecation or perhaps when wiping oneself.
- Hemorrhoids can be divided into internal and **external hemorrhoids**.
- Swollen hemorrhoids are a common condition that affects millions of people.
- They can cause bleeding, itching, discomfort, or serious pain.
- Severe pain usually occurs when thrombus inside the blood vessels; this condition is known as thrombosed hemorrhoids.
- Eating food rich in fiber and utilizing mild stool softeners might soften the stools and improve the signs and symptoms.

Sitting for Few Minutes in Three to Four Inches of Warm Water a Few Times a Day May Help

These are known as sitz baths. Some topical ointments could also help with the signs and symptoms. Hemorrhoid surgical procedure is recommended when common treatments fail. There are many ways to treat hemorrhoids. Inner hemorrhoids can be treated by banding. This is done by placing a tight rubber band around the base of the hemorrhoids. This is usually not painful. This might be done at more than one setting and anesthesia is not usually required.

- Other procedures for **internal hemorrhoids** can be done under local or general anesthesia.
- Large external or internal hemorrhoids are best treated surgically.
- The veins are cut out surgically.
- The incision is closed with affordable sutures that will disappear on their own.
- Some hemorrhoids can be injected with a special material that causes them to shrink and stop bleeding.
- Hemorrhoids can also be coagulated or burned with special tools.
- However, none of these methods guarantees that the hemorrhoids will not come back.

Some Patients Believe Surgery is Actually Safe

However, there are several possible risks and issues. You need to know about them just inside cause they happen. By being informed, you may be able to help your doctor detect complications early. The risks and complications include those related to anesthesia and those related to any type of surgery. Risks related to anesthesia include, but are not limited to, strokes, pneumonia, and blood clots in the legs. These risks are going to be discussed with you in greater detail by your anesthesiologist.
